# Influence of Inpatient Dietary Restriction on Acute Uncomplicated Diverticulitis

## A Pilot Observational Study

**Research Team:** Megan Crichton, Camilla Dahl, Skye Marshall, Julie Jenkins-Chapman, Romina Nucera, Yvonne Chen, Kayla Russell, Sophie Mahoney

# Background

# Background

- >152,000 annual hospitalisations
- Length of stay 3-4 days
- 1.5 million days of inpatient care
- Annual cost AUD\$3.4 billion

# Background

Dietary manipulation  
is a core component  
of management

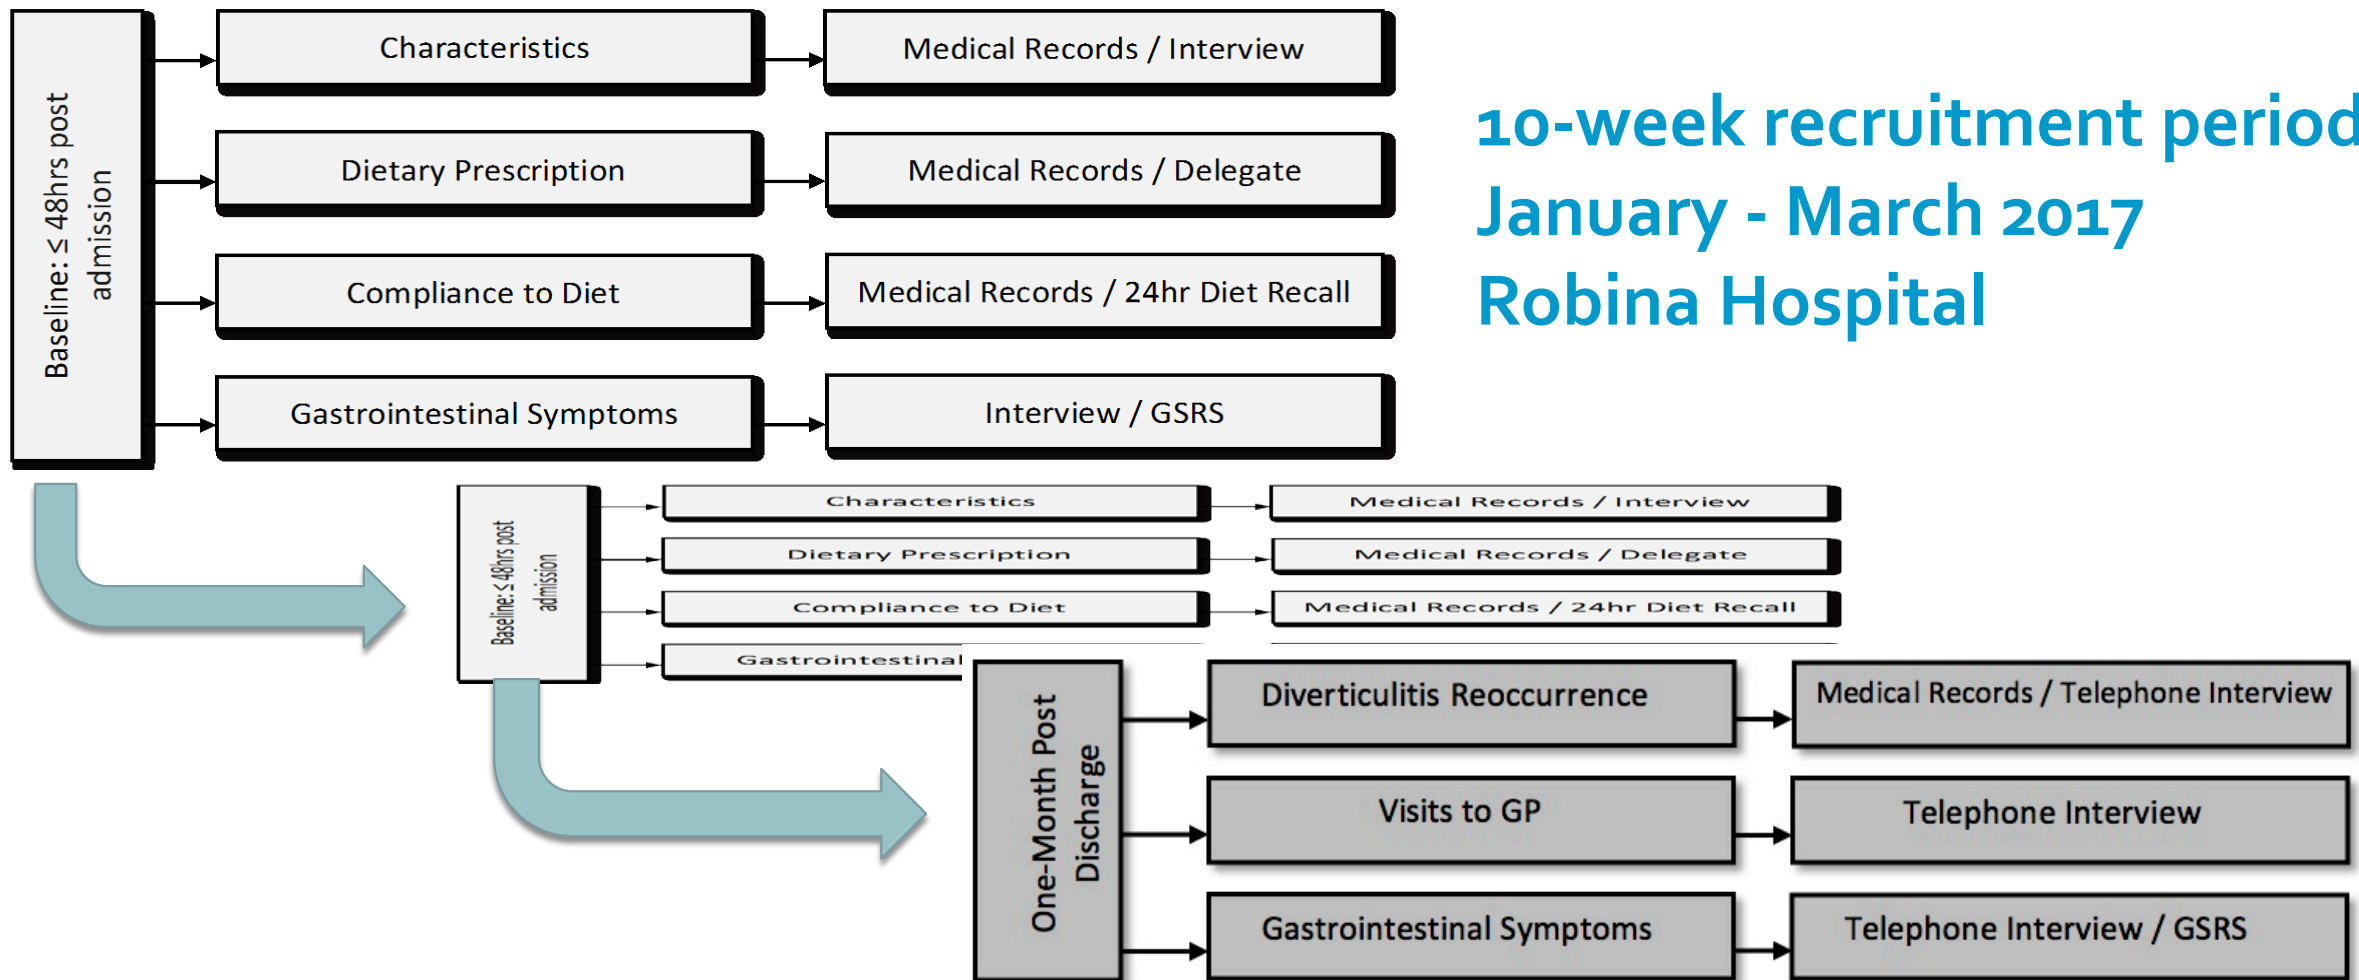

# Research Question

What is the effect of inpatient prescription of liberalised diets compared with restrictive diets on hospital length of stay and 30-day diverticulitis reoccurrence?

Liberalised diet = solid food in  $\leq 48$  hours  
Restricted diet = fasting/fluid only for  $\geq 48$  hours

# Methods

10-week recruitment period  
January - March 2017  
Robina Hospital

# Results: Recruitment

# Results: Baseline Characteristics

	Inpatient Diet Analysis at Baseline	
Participant Characteristics	Restricted Diet (n=16)	Liberalised Diet (n=11)
<b>Age (years)</b>	54 ± 11*	65 ± 14*
<b>Body Mass Index (kg/m<sup>2</sup>)</b>	26.7 ± 3.3	27.6 ± 5.7
<b>Presenting Temperature (°C)</b>	36.8 ± 0.6	36.8 ± 0.7
<b>Gender (female)</b>	9 (56%)	8 (73%)
<b>Ethnicity (Caucasian Australian)</b>	11 (69%)	6 (55%)
(Caucasian European)	1 (6%)	3 (27%)
(New Zealander)	2 (13%)	2 (18%)
(African)	1 (6%)	0
(Asian)	1 (6%)	0
<b>Cigarette Smoking (yes)</b>	4 (25%)	2 (18%)
<b>Exceeding ETOH Guidelines (yes)</b>	4 (25%)	2 (18%)
<b>History of Diverticulosis (yes)</b>	5 (31%)*	9 (82%)*
<b>History of Diverticulitis (yes)</b>	4 (25%)	6 (55%)
<b>Previous Admission (yes)</b>	3 (19%)	5 (46%)
<b>Admitted with Diarrhoea (yes)</b>	6 (40%)	3 (27%)
<b>Admitted with Constipation (yes)</b>	3 (20%)*	7 (64%)*

\* P < 0.05

	Inpatient Gastrointestinal Symptoms	
Inpatient Gastrointestinal Symptoms	Restricted Diet (n=16)	Liberalised Diet (n=11)
<b>Total GSRS Score</b>	8.9 ± 3.4	7.6 ± 3.0
Abdominal Pain	2 (0-4)	1 (1-3)
Reflux	0 (0-4)	0 (0-2)
Indigestion	3.9 ± 2.1	2.6 ± 1.6
Constipation	1.6 ± 1.3	1.5 ± 1.2
Diarrhoea	0.5 (0-8)	2 (0-4)

P > 0.05

# Results: Length of Stay

---

**Length of Stay (days)**

---

---

**Length of Stay (days)**

---

\*  $P=0.031$  BUT small sample size, not precise

# Results: Length of Stay

After accounting for smoking status  
and GSRS Score at baseline,

Liberalised diet decreased LOS by  
**1.1 days\***

( $P=0.035$ )

# Results: Reoccurrence / GP Visits

	Restricted Diet Group (n=16)	Liberalised Diet Group (n=11)	
Reoccurrence	1	0	<b>P&gt;0.05</b>
GP visits	5	2	

# Take Home Message

A liberalised diet may be favourable compared to a restricted diet

**BUT**

a larger sample size and RCT is needed to strengthen confidence in findings.
