RESEARCHER INNOVATION

IN AN INCREASINGLY DIGITAL WORLD

To research our topic interviews were conducted with two people who both studied at university in the 1990s and again within the last two years. They were asked questions about their interactions with information then and now, as it related to course materials and assignment research.

TAKEAWAYS_

This qualitative study uncovered some innovative techniques being used by students. Both case study respondents indicated that interacting with information in print-based format, informed their use of the equivalent information in the digital landscape.

With digital you can just hold down the shutter button all day if you want. But I've been aware of that and bring some more deliberate thoughts to the digital side of things. Stop getting scattered with all of the millions of tabs.
