Australian Tactical Loads and their Operational Impacts

Dr Rob Orr (PhD, PHTY, BFET, TSAC-F, ADFPTS)

4th International Congress on Soldiers’ Physical Performance
28 November - 1 December 2017
Melbourne Australia

https://bond.edu.au/tru
Background

• From the early Assyrian spearman of antiquity (circa 800 B.C.), soldiers have been required to carry external loads consisting of weaponry, equipment and food
  (Orr, 2010; Knapick et al., 2012:2004)

• Downstream effects of these loads have been shown to impact on the tactics of warfare, cause injury and reduce fighting force size
  (Lee, 2007; Breen, 2002; Lothian, 1921)
HISTORICAL CONTEXT – MILITARY

(Orr, 2010: Orr et al., 2015)

https://bond.edu.au/tru
CURRENT CONTEXT – AUSTRALIAN ARMY

On Operations (2001-2010)

• PO loads
  • $M = 28.4 \pm 10.0$ kg
  • heaviest mean load in 2008 ($M = 36.9 \pm 10.8$ kg)

• MO loads
  • $M = 56.7 \pm 15.3$ kg
  • heaviest mean load in 2009 ($M = 65.1 \pm 16.3$ kg)

• OVERALL loads
  • $47.7 \pm 21.0$ kg, (mean range over 10 years = 40.7 kg to 50.9 kg),

(Orr et al., 2015)
CURRENT CONTEXT – AUSTRALIAN ARMY

• Approximate relative load carried by Roman Legionnaires = 56%
• Australian Soldiers in East Timor = 56%
• US Soldiers in Afghanistan = 57%

1 Joint Public Affairs Team - Australian Army
ABSOLUTE VS RELATIVE LOADS

Currently female soldiers carry lighter absolute loads than male soldiers but only slightly heavier relative loads

<table>
<thead>
<tr>
<th></th>
<th>ABSOLUTE LOADS*</th>
<th>RELATIVE LOADS</th>
</tr>
</thead>
<tbody>
<tr>
<td>FEMALE:</td>
<td>$M = 26.4$ kg</td>
<td>FEMALE: $M = 43%$</td>
</tr>
<tr>
<td>MALE:</td>
<td>$M = 39.0$ kg</td>
<td>MALE: $M = 47%$</td>
</tr>
<tr>
<td>$p = .045$</td>
<td></td>
<td>$p = .55$</td>
</tr>
</tbody>
</table>

ABSOLUTE VS RELATIVE LOADS

• Currently lighter soldiers carry the same absolute loads as heavier soldiers but heavier relative loads

**ABSOLUTE LOADS**

<table>
<thead>
<tr>
<th></th>
<th>Light 20%: $M = 34.7$ kg</th>
<th>Heavy 20%: $M = 35.7$ kg</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>p</strong></td>
<td><strong>.902</strong></td>
<td><strong>.0509</strong></td>
</tr>
</tbody>
</table>

**RELATIVE LOADS**

|          | Light 20%: $M = 49\%$    | Heavy 20%: $M = 36\%$    |

HISTORICAL CONTEXT – LEO

http://2.bp.blogspot.com/-xHSILUF/IMDLjRhrEgI/AAAAAAAAIpc/54yapn_ibtE/s1600/Curious+Black+&+White+Photographs+of+The+Police+Officers+from+1890–1930+(28).jpg

HISTORICAL CONTEXT – LEO

• Police are becoming Christmas trees
HISTORICAL CONTEXT - LEO

• Increasing levels of threat
HISTORICAL CONTEXT – AUSTRALIAN LEO

</tbody>
</table>

(Orr et al., 2016)
ABSOLUTE VS RELATIVE LOADS

• The LEO study found female officers carried the same absolute loads compared to the male officers
• However when expressed as a percentage of their body weight female officers carried significantly more relative load than male officers

(Orr et al., 2016)
**CURRENT CONTEXT – AUSTRALIAN LEO (TOU)**

<table>
<thead>
<tr>
<th></th>
<th>Mean ± SD</th>

<tr>
<td>Relative load carried (%BW)</td>
<td>25.9 ± 4.0</td>
<td>21.2-28.8</td>
</tr>
</tbody>
</table>

(Carbone et al., 2014; Carlton et al., 2014)
SEX DIFFERENCES IN LC INJURIES

- Mean ARA population over 2 years = 24,876 personnel
  - Female n= 2441 (10%): Male n= 22435 (90%)

- 401 reported injuries associated with load carriage
  - Female n=40 (10%): male n= 361 (90%)
  - RR = 1.02 (95% CI 0.74 to 1.41)

- SPI
  - Female n=6 (15%): male n= 23 (6%)
  - RR of SPI = 2.40 (95% CI 0.98 to 5.88)

https://bond.edu.au/tru
IMPACTS ON PERFORMANCE - MARKSMANSHIP

• Decrement in performance:
• Reduced performance
  • Survey of 218 soldiers on operations

(Orr et al., 2013)
IMPACTS ON PERFORMANCE - MARKSMANSHIP

- Distance to centre of target
  - DCOT
- Horizontal shot spread
  - X-Dispersion
- Vertical shot spread
  - Y-Dispersion

Carbone et al., 2014
IMPACTS ON PERFORMANCE - MARKSMANSHIP

• Mobility Task

Carbone et al., 2014
IMPACTS ON PERFORMANCE - MARKSMANSHIP

• Marksmanship

Carbone et al., 2014
IMPACTS ON PERFORMANCE - MARKSMANSHIP

• No significant difference when TL

Orr et al., Unpublished
IMPACTS ON PERFORMANCE - MARKSMANSHIP

• Visual Analogue Scale (VAS)

Orr et al., Unpublished

https://bond.edu.au/tru
IMPACTS ON PERFORMANCE - MARKSMANSHIP

- Perceived significant improvement in marksmanship when TL
  - Primary – VAS +3.00 ± 2.53 (p = 0.016)
  - Secondary – VAS +2.83 ± 2.93, (p = 0.039)

- Correlations between perceptions of load carriage impacts on performance and actual marksmanship scores
  - Primary: Short move: \( r = -0.347, \) (p = 0.500) and mobility task: \( r = -0.401 \) (p = 0.431)
  - Secondary: Short move: \( r = -0.631 \) (p = 0.179) and mobility task: \( r = -0.306, \) (p = 0.555)

Orr et al., Unpublished
IMPACTS ON PERFORMANCE - MARKSMANSHIP

• GD police (n=11)
  • Average marksmanship scores (p=.118)
  • ILAV B – smallest SD,
    • ILAV A: a negative impact, -2.1 (95% CI -5.5 to +1.3)
    • ILAV B: a positive impact, +2.7 (95% CI +0.4 to +5.0)
    • ILAV C: a negative impact, -1.7 (95% CI -4.4 to +0.9)
    • Normal station wear: a positive impact, +1.4 (95% CI -2.2 to +5.0)

Schram et al., unpublished
Schram et al., unpublished
IMPACTS ON PERFORMANCE - MOBILITY

• Decrement in performance:
  • ↓ Mobility
    • Impeded mission success (Breen 2000)
IMPACTS ON PERFORMANCE - MOBILITY

- Victim Drag (10m)
- Police Vehicle Exit and Sprint

Schram et al., unpublished

<table>
<thead>
<tr>
<th>Condition</th>
<th>Victim Drag</th>
<th>Vehicle Exit</th>
</tr>

<tr>
<td>10m dummy drag (sec)</td>
<td>6.89 ± 0.44</td>
<td>7.79 ± 0.75*</td>
</tr>
<tr>
<td>Total time (sec)</td>
<td>9.29 ± 0.53</td>
<td>10.25 ± 0.77*</td>
</tr>
</tbody>
</table>

* Indicates statically significant differences between unloaded and loaded, p<0.01.
ENCAPSULATION

• Loads for both LEO and Army are increasing
• Female soldiers carry lighter absolute but similar relative loads
• Female LEO carry similar absolute but heavier relative loads
• There are differences in injuries sustained based on sex
• There are different impacts of load on marksmanship (primary / secondary weapon)
• Soldiers think load reduces marksmanship, LEO varies but appear accurate
• Load impacts on mobility – but the load may need to reach a threshold
